EDUCATION

University Of Global Village(2022-2026)
Bsc in Computer Science And Engineering

Amrita Lal Dey College(2018-2020)
Science

Dapdapia High School (2018)
Science

SKILLS

- ASP.Net
- C#
- Angular
- React
- Node.js
- Next.js
- TypeScript
- MongoDB
- Express
- Tailwind
- SQL

ABOUT ME

My name is Md. Hasibul Islam, and I am a Computer Science and Engineering student. I have had a strong passion for computers since my childhood.
In 2024, I started learning application development seriously. I enjoy building web applications using modern technologies like React, Next.js, and Node.js.
Since 2025, I have started working with ASP.NET, and SQL. I am always eager to learn new technologies and contribute to meaningful projects.

EXPERIENCE

fingertyping.com   2024 - Present
Developer

This is my personal hobby open-source project. I wanted to create a simple, visually appealing, and ad-free typing website, so I developed Finger typing. It's built using Next.js, React, TypeScript, and Tailwind.

ejobbd.vercel.app   2025- Present
Developer

This is also hobby project. It's built using Vite, React, JavaScript, and Tailwind, ShadCn, ExpressJs, JWT, BcryptJs. This is my first complete full-stack website

notehour.vercel.app   2025- Present
Developer

NoteHour – A modern time-tracking web app built with Next.js. I needed a way to track my time on an hourly basis, but I couldn't find a simple note-taking app that saved notes by the hour and provided useful analytics. So, I created NoteHour. It's a great tool especially for students

prompttoai.vercel.app   2025- Present
Developer

I was found an issue when I needed to submit question to an AI like ChatGPT. The next time I wanted to submit similar text but on a different topic, it was frustrating to rewrite same question. So, I developed a solution that allows me to save prompts and simply change the variables. This way, I can easily submit text from a single website to multiple Ai.
